

Spinning Paper Earth Craft

Use this printable template to create a 3D Spinning Paper Earth Craft.

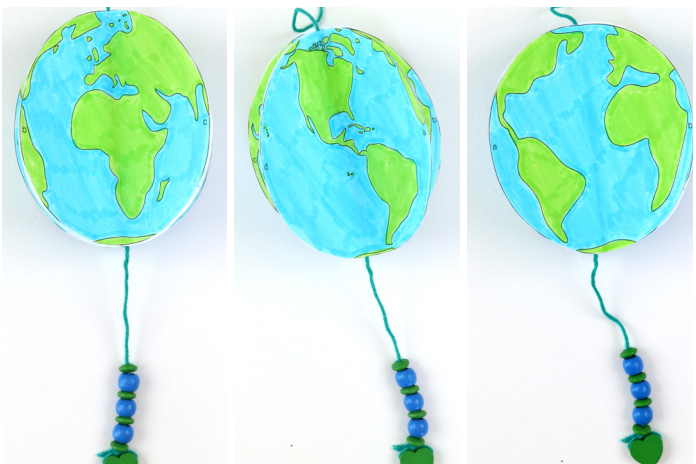

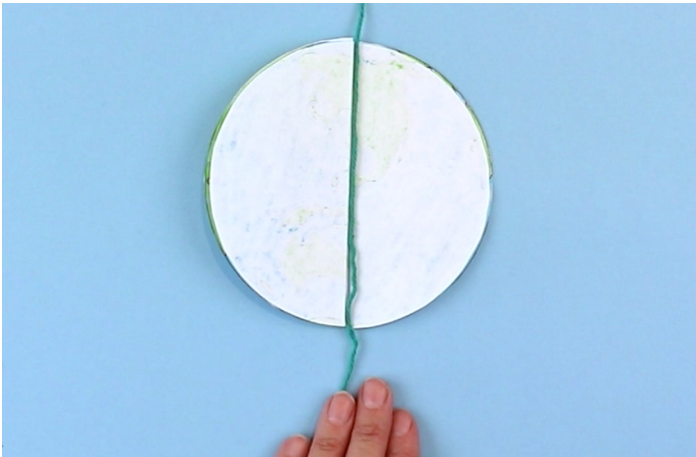

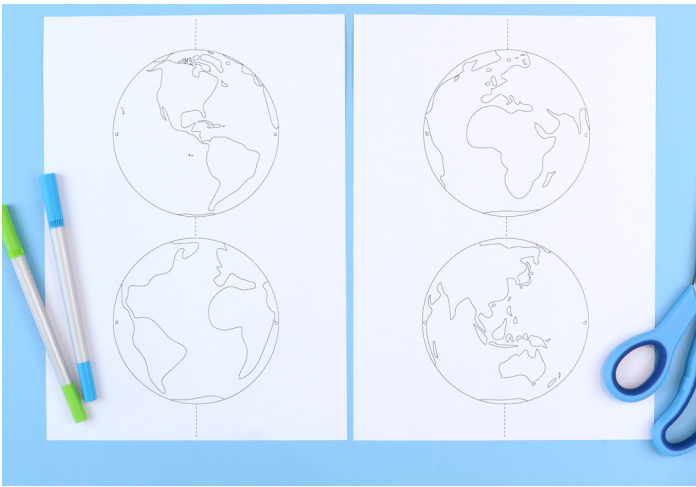

This paper craft is super easy to cut out and glue together and makes a fun craft for kids aged 6 age and up (approx, depending on the level and ability of the child).

You will need:

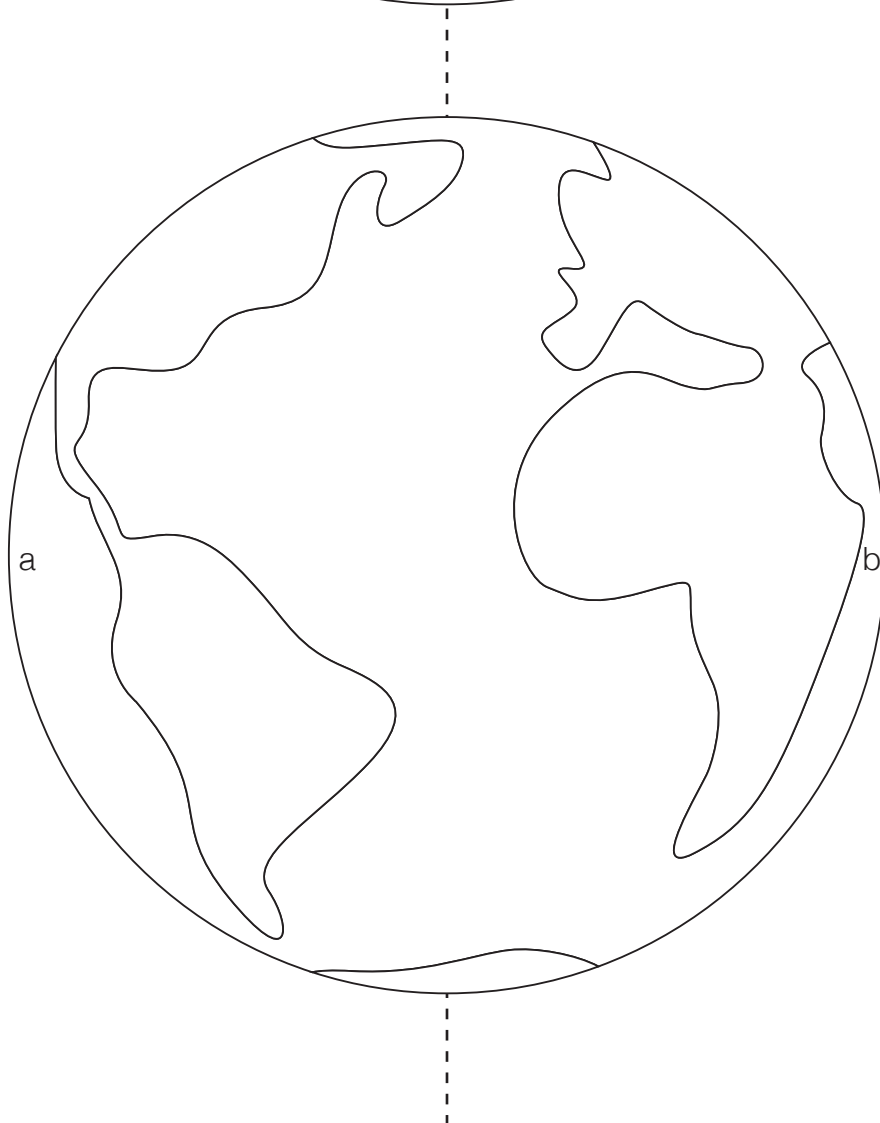

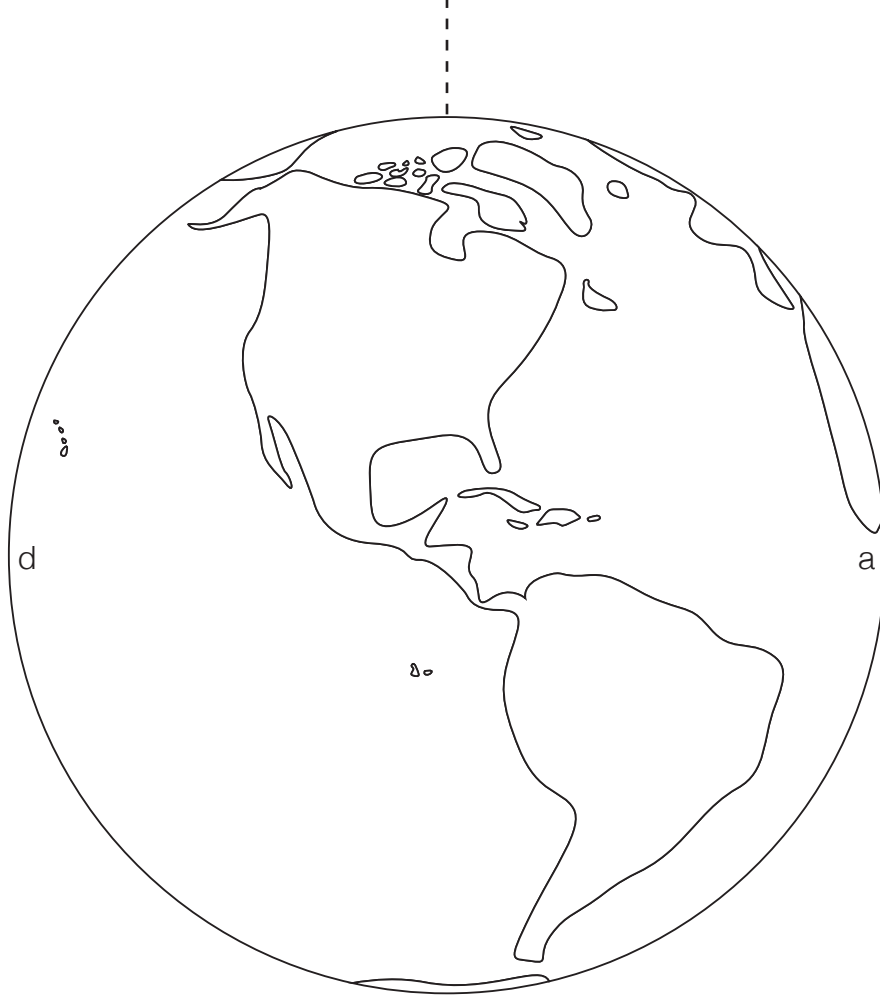

- The template printed onto ordinary white paper
- Green and blue markers, pencils or crayons
- Glue stick
- Scissors
- String for hanging
- Wooden beads
- Optional needle threader and large-eyed needle for threading the beads onto the string

How To:

1. Print the template onto plain white paper.
2. Color in the four different angles of Earth
3. Fold the page down the center line both forwards and backwards, then unfold and cut the shapes out. It is a good idea to glue them together as you go.
4. Fold each earth shape in half, then match the corresponding letters together and glue the earth shapes back to back. Before gluing the final side together place a piece of string down the center. Stick a piece of sticky tape over it to keep the string in place. Glue the final side down.
5. Thread beads onto the base of the string. This will keep it weighted down so it spins better. If the beads have a narrow hole you might need to use a needle and needle threader to thread them onto the end.
6. Tie a loop in the top of the string and hang somewhere where it can catch the breeze (preferably under cover).
